PROFESSIONAL SUMMARY

Information Technology engineering student focused on Cloud and DevOps, with a practical, project-driven approach to learning software development, Linux, and infrastructure tooling. Built personal projects involving system monitoring, Linux and Docker troubleshooting, local AI applications, and workflow automation. Earned 20+ Google Cloud Skills Boost badges and scored 100/100 on the AWS Educate Cloud 101 final assessment. Seeking a Cloud/DevOps internship where I can contribute to automation, troubleshooting, and reliable software delivery while strengthening my hands-on engineering skills.

TECHNICAL SKILLS

Cloud Platforms: Google Cloud learning labs and skill badges, AWS Educate Cloud 101, IBM Cloud Computing Fundamentals

DevOps & Tools: Docker, Git, GitHub, YAML, CI/CD fundamentals

Linux & Troubleshooting: Linux CLI, process and resource inspection, file permissions, log review, basic system troubleshooting

Programming Languages: Python, JavaScript, C, C++, Java, Bash fundamentals

Networking: TCP/IP, DNS, HTTP/HTTPS, basic network connectivity troubleshooting

Application Development: Flask, HTML, CSS, Ollama, local language-model integration, unit testing

Development Practices: Version control, project documentation, preview-before-apply workflows, rule-based fallbacks

EDUCATION

Bachelor of Engineering – Information Technology
Trinity Academy of Engineering, Pune
Savitribai Phule Pune University | 2024 – Present

Relevant Coursework: Computer Networks, Operating Systems, Data Structures, Object-Oriented Programming

PROJECTS

DevOps Incident Troubleshooter – Personal Project
GitHub: github.com/Yadnu14/devops-incident-troubleshooter

- Built a troubleshooting-focused project to help investigate common Linux and Docker incidents.

- Structures diagnostic steps, potential causes, and recovery verification to make investigations more systematic.
- Focuses on practical troubleshooting rather than claiming fully automated incident remediation.
- **Tech Stack:** Linux, Docker, troubleshooting

Python System Monitor – Personal Project
GitHub: github.com/Yadnu14/python-system-monitor

- Developed a Python utility that periodically monitors CPU, memory, and disk usage using psutil.
- Added readable terminal output and logging support to make system resource usage easier to inspect.
- Included Docker packaging files to support container-based execution.
- **Tech Stack:** Python, psutil, Colorama, Docker, Git

LazySort AI – Personal Project
GitHub: github.com/Yadnu14/LazySort-AI

- Developed a local-first file organizer using Flask and Ollama/Gemma, with a rule-based fallback when AI suggestions are unavailable.
- Implemented a workflow for reviewing and editing file organization suggestions before explicitly applying changes.
- Designed safeguards to avoid recursive scanning, file deletion, and overwriting existing files.
- Added unit tests for core application behavior.
- **Tech Stack:** Python, Flask, Ollama, Gemma 3 4B, HTML, CSS, JavaScript, unit testing

FieldNote AI – Personal Project
GitHub: github.com/Yadnu14/FieldNote-AI

- Built a local-first Flask application around outdoor micro-adventures and journaling.
- Integrated a locally hosted language model to support the application workflow.
- **Tech Stack:** Python, Flask, Ollama, local AI

GigCraft AI – Personal Project
GitHub: github.com/Yadnu14/GigCraft-AI

- Developed a Flask application that turns freelance client briefs into structured project plans.
- Explored local language-model integration for converting unstructured requests into actionable outputs.
- **Tech Stack:** Python, Flask, Ollama, local AI

EXPERIENCE & TRAINING

Cloud, Linux & DevOps Learning – Independent Projects and Online Platforms

- Completed hands-on Google Cloud Skills Boost labs across cloud services and infrastructure topics.
- Practised Linux command-line usage, system resource inspection, and basic networking through self-directed learning and project work.
- Applied Python, Git/GitHub, Flask, and Docker in personal software projects.

- Explored local AI integration with Ollama and Gemma while developing applications designed to run on a personal computer.
- Used project testing, documentation, and controlled workflows to improve reliability and make application behavior easier to review.

CERTIFICATIONS & BADGES

- Google Cloud Skills Boost – 20+ skill badges
- AWS Educate Cloud 101 – Final assessment score: 100/100
- IBM Cloud Computing Fundamentals
- Trust and Security with Google Cloud – Simplilearn
- AI for Beginners – HP LIFE
- Cybersecurity Awareness – HP LIFE

SOFT SKILLS

Problem Solving • Self-Directed Learning • Attention to Detail • Practical Debugging • Adaptability • Technical Documentation

ADDITIONAL INFORMATION

Languages: English, Hindi, Marathi; German (Basic)

Interests: Cloud Infrastructure, DevOps Automation, Linux, System Troubleshooting, Local-First AI, Open Source Software
